

Explanation of Intended Effect

Post Mining Land Use Pilot Project Macquarie Coal Complex State-led rezoning

July 2026

Acknowledgement of Country

The Department of Planning, Housing and Infrastructure acknowledges that it stands on Aboriginal land. We acknowledge the Traditional Custodians of the land, and we show our respect for Elders past, present and emerging through thoughtful and collaborative approaches to our work, seeking to demonstrate our ongoing commitment to providing places in which Aboriginal people are included socially, culturally and economically.

Have your say

The Department of Planning, Housing and Infrastructure welcomes your feedback on the proposed Post Mining Land Use Pilot Project – Macquarie Coal Complex, Explanation of Intended Effect, and amendments to the *Lake Macquarie Local Environmental Plan 2014*, *State Environmental Planning Policy (Precincts-Regional) 2021* and *State Environmental Planning Policy (Planning Systems) 2021*.

The Department will publish all individual submissions and a consultation summary in the final report once it has assessed and analysed the submissions.

You can view the Explanation of Intended Effect and supporting documents at

<https://www.planningportal.nsw.gov.au/macquarie-coal-complex>.

To make a submission online, please follow the steps below:

- 1) Read our Privacy Statement and decide whether to include your personal information in your submission.
- 2) Fill in the online submission form. Your submission can either be typed or uploaded as a PDF and should include:
 - a) the name of the proposal Post Mining Land Use Pilot Project – Macquarie Coal Complex
 - b) a brief statement on whether you support or object to the proposal
 - c) the reasons why you support or object to the proposal.
- 3) You must disclose reportable political donations and gifts. Anyone lodging submissions must declare reportable political donations and gifts (including donations of \$1,000 or more) made in the previous 2 years.
- 4) Agree to our online statement and lodge your submission.

You may also lodge your submission via post by sending it to:

Executive Director, State Rezoning
Department of Planning, Housing and Infrastructure
Locked Bag 5022
Parramatta NSW 2124

All submissions will be made public in line with our objective to promote an open and transparent planning system. If you do not want your name or other personal identifying details published, please state this clearly at the top of your submission.

To find out more, please visit <https://www.planningportal.nsw.gov.au/macquarie-coal-complex>.

1 Introduction

1.1 Purpose

This Explanation of Intended Effect (EIE) sets out proposed amendments to the *Lake Macquarie Local Environmental Plan 2014*, *State Environmental Planning Policy (Precincts-Regional) 2021* and *State Environmental Planning Policy (Planning Systems) 2021* to rezone land in Post Mining Land Use Pilot Project – Macquarie Coal Complex for employment generating land uses.

The Rezoning Proposal will facilitate the delivery of:

- At least 500 hectares of developable land
- up to 1,130 new jobs
- around 36 hectares of new open space

The Department of Planning, Housing and Infrastructure (the Department) has prepared this EIE to outline the proposed planning control changes, considerations and intent of the draft Rezoning Proposal.

The changes to planning controls proposed under this Rezoning Proposal will be implemented through amendments to *State Environmental Planning Policy (Precincts-Regional) 2021* (Precincts Regional SEPP) made under Section 3.29(1) of the *Environmental Planning and Assessment Act 1979* (EP&A Act).

The public is invited to comment on all the matters in this EIE and supporting document which can be viewed online on the [NSW Planning Portal](#).

1.2 Intent of rezoning Macquarie Coal Complex

This Explanation of Intended Effects (EIE) sets out the proposed planning framework, including a draft Master Plan for future development within the Macquarie Coal Complex (the Precinct). A staged approach is proposed, with final zoning and permissibility for the Precinct to be informed by submissions and ongoing investigations.

The proposed draft Master Plan and rezoning is in response to the NSW Parliamentary Inquiry into Beneficial and productive post mining land use. The proposed rezoning of Macquarie Coal Complex has been prepared in collaboration with Glencore, Lake Macquarie City Council (Council), Department of Primary Industries and Regional Development, and Australian Government through Net Zero Economy Authority (NZEa) as a whole of government approach to beneficial post mining land use.

This EIE seeks to propose amendments to facilitate productive land uses at the Macquarie Coal Complex. The rezoning proposal is an ongoing and iterative process to support transformation from mining to productive, employment generating land uses. Investigations will continue to make sure the full extent of redevelopment of the site can be realised.

This EIE is publicly exhibited and invites feedback from key stakeholders and the community on the proposed rezoning. Submissions received during public exhibition on the rezoning proposal will be considered ahead of finalisation of the rezoning proposal and may be amended prior to finalisation.

1.3 Rezoning pathway

The Department's State Significant Rezoning Policy includes a State Led Rezoning (SLR) pathway which seeks to identify and delivery strategically important rezonings that can contribute to the housing and employment needs of NSW's growing population, where sites meet certain criteria.

The Rezoning Proposal has been identified as a project to proceed as a State-led rezoning under the State Significant Rezoning Policy.

In accordance with the State Significant Rezoning Policy the Rezoning Proposal was considered to meet the eligibility criteria as it will:

- create up to 1,130 direct jobs
- deliver beneficial uses for post mining land
- benefit from a State rezoning pathway due to the complexity of the post mining nature of the site, and coordination with key agency stakeholders.

1.4 Site location and description

The Rezoning Proposal applies to 1,160 hectares of land and includes land at Macquarie Coal Complex and Teralba Southgate (the Precinct) across the following areas:

- West Wallsend (ceased mining in 2016)
- Westside (ceased mining in 2012)
- Macquarie Coal Preparation Plant (ceased production in 2016)
- Teralba Southgate (ceased mining in 2001)

This area will be referred to in this document as the Precinct and is shown in the Macquarie Coal Complex location plan in Figure 1.

The Precinct is on the land of the Awabakal people and is (approximately 28 allotments) currently owned by Macquarie Coal Joint Venture. Mining operations on the site has ceased, with the site advancing through rehabilitation works in accordance with the Macquarie Coal Rehabilitation management Plan (2022). The Precinct is well located in the Lake Macquarie Local Government Area (LGA), approximately 20 kilometres south-west of Newcastle and approximately 110 kilometres north of the Sydney CBD.

1.4.1 Macquarie Coal Complex (the Precinct)

The Precinct is currently zoned SP1 Special Activities (Mining), C2 Environmental Conservation, C3 Environmental Management, and RU2 Rural Landscape. The Precinct includes a number of existing roads, both public and private as well as utility easements bisect the site. It is characterised by significant portions of remnant native vegetation as well as areas subject to rehabilitation obligations and cleared land associated historical mine uses.

The Precinct sits adjacent to the Lake Macquarie North West Catalyst Area and is bounded by the suburb of Barnsley to the north, Cockle Creek and the Central-Coast Newcastle main passenger and freight train line to the east, Teralba and Wakefield to the south and Killingworth to the west. The M1 Pacific Motorway and Sugarloaf State Conservation Area are also located within in close proximity.

Figure 1 | Macquarie Coal Complex (the Precinct) location plan (Source: The Department of Planning, Housing and Infrastructure)

1.5 Strategic context

In 2024, the NSW Government launched an inquiry to investigate new and innovative approaches to post mining land use to make sure mining sites continue to bring economic investment to regional communities after mines close. The findings of the inquiry '*Report No. 53 Beneficial and productive post mining land use*' were published including the NSW's response to the inquiry. The NSW Government supported all of the recommendations in the inquiry.

Specifically, the following recommendations are relevant to this project:

- **Recommendation 1** – Review of existing legislation relating to post mining rehabilitation, mining closure and future land use, to facilitate the transformation of former mining sites.
- **Recommendation 6** – Focus exploring immediate opportunities for two pilot projects (Mt Arthur Mine and Macquarie Coal Complex) to identify practical impediments and necessary legislative and regulatory changes to enable land use change, and to establish a State-wide model for post mining land use pathway.

The Rezoning Proposal was progressed by the Department in partnership with Australian Government through NZEA, Council, other NSW Government agencies and Glencore.

Following the exhibition of the rezoning proposal, a recommendations report will be prepared. The report will make recommendations on further amendments to the *Environmental Planning and Assessment Act 1979* (EP&A Act) and the *Mining Act 1992*. The recommendations will be focussed on enabling the post mining land use at the Macquarie Coal Complex, and more broadly across the State as the energy transformation continues. The recommendations will inform regulatory reform to create a more streamlined planning pathway for redevelopment of post mining land. The refined regulatory framework may still require additional technical studies to satisfy suitability of the land, however, it is intended that there will be a clear pathway to undertake development consent on post mining land.

The proposed amendments set out in this EIE can occur independently of the recommended amendments to the EP&A Act and Mining Act.

1.5.1 Hunter Regional Plan 2041

The Hunter Regional Plan 2041 establishes the strategic land use plan for the Hunter region. A key component of the plan is managing the Hunter's shift from coal mining and other alternative industries by supporting local communities by planning for these mine closures early. See mine and power stations located in the Hunter in Figure 2.

The Rezoning Proposal will provide economic and employment opportunity and sustainability which is a priority in the Hunter Regional Plan 2041.

1.5.2 Lake Macquarie Local Strategic Planning Statement

The Lake Macquarie Local Strategic Planning Statement (LSPS) establishes a 20-year vision for Local Government Area (LGA) and guides Council's local decision making and future developments. The Lake Macquarie LSPS emphasises the importance of supporting a diverse local economy to increase job opportunities, facilitate economic growth and investment and encourage innovation and future emerging industries. The LSPS recognises the strategic value of reusing former mine industrial land in the LGA to be utilised for these emerging industries. Figure 3 shows the site's location within the regionally significant growth area on the Lake Macquarie City Structure map.

The Rezoning Proposal aligns with the objectives of the Lake Macquarie LSPS, as it will enable and streamline the process of transforming former mine sites into new industrial and employment uses to drive economic growth and investment, utilise existing infrastructure and job skills and create long-term local jobs.

1.5.3 Lake Macquarie City Council Draft Employment Land Use Strategy

The Lake Macquarie City Council draft Employment Land Use Strategy establishes a framework to support the shift from historically dominant uses such as mining and manufacturing to maintain an ongoing supply of employment land across the LGA. It provides sufficient, well-located and serviced land is available to support local jobs, attract investment and foster a resilient economy while also balancing environmental stewardship.

The Rezoning Proposal aligns with the priorities of the strategy by facilitating the adaptive re-use of post-mining land for employment land that is accompanied by existing and planned infrastructure (refer to Figure 3). The introduction of the Precincts Regional SEPP and precinct master plan will create a clear planning framework for employment land and balance the needs of local job creation with environmental protection.

Figure 2 | Mine and power stations located in the Hunter (Source: Hunter Regional plan, NSW Government)

Figure 3 | Lake Macquarie City Structure Map (Source: Draft Employment Land Use Strategy, Lake Macquarie City Council, 2026)

1.6 Consultation

The Department has worked closely with Glencore, Council, Australian Government through NZEA and various NSW Government agencies to prepare this Rezoning Proposal. Following exhibition, further consultation will occur with Council, government agencies and to address community feedback and key issues raised.

Community consultation is an important part of the planning process. The public exhibition of the Rezoning Proposal is the formal consultation period for the community, Council and agencies to provide their feedback through a submission.

The Department encourages the community and stakeholders to make submissions during the public exhibition period to allow feedback to be considered prior to the proposal's finalisation.

2 Proposed planning control amendments

2.1 Objectives and intended outcomes

This section sets out the proposed amendments to planning controls to realise the intent of the Rezoning Proposal.

The key objectives and intended outcomes of the Rezoning Proposal are to:

- deliver a diverse range of land uses that support regional economic diversification, attract investment and create local jobs
- facilitate the orderly transformation from mining to productive post-mining uses through a coordinated, staged approach that aligns land use planning with mine closure, rehabilitation and infrastructure delivery.
- establish a flexible and adaptive planning framework that responds to changing environmental, economic and market conditions over the long-term delivery of the Precinct
- protect environmental values, including remnant native vegetation, threatened ecological communities, coastal wetlands, riparian corridors and habitat linkages
- leverage existing transport connections and infrastructure to establish an efficient, well-serviced Precinct

Any development application lodged within the Precinct before the commencement of the new Precincts-Regional SEPP chapter will be assessed under the existing LMLEP 2014 development controls. Any agreement, covenant, or other similar instrument that restricts the carrying out of that development on the land in which the Precinct is located will also be suspended.

The proposed amendments to the *State Environmental Planning Policy (Precincts—Regional) 2021* (Precincts-Regional SEPP), *Lake Macquarie Local Environmental Plan 2014* (LMLEP 2014) and *State Environmental Planning Policy (Planning Systems) 2021* (Planning Systems SEPP) to facilitate these outcomes are outlined below in Sections 2.2 and 2.3.

2.2 Proposed changes to planning instruments

The proposed amendment seeks to remove the Precinct from the LMLEP 2014 and amend the Precincts-Regional SEPP to include a new chapter that will apply to land within the Precinct (refer to Figure 4 Land application Map). The new chapter will apply to the Precinct and will set out:

- aims
- consent authority requirements for development
- relationship to other environmental planning instruments
- land use table and development permissibility
- exempt and complying development
- role and requirements for Master plans
- general provisions.

Figure 4 | Land Application (Source: The Department of Planning, Housing and Infrastructure)

2.2.1 Land use zoning

The Precinct is currently zoned SP1 – Special Activities (Mining), C2 – Environmental Conservation, C3 – Environmental Management, and RU2 – Rural Landscape under the LMLEP 2014 (see Figure 6). It is proposed to rezone the Precinct to a zone that will enable land uses to facilitate a wide range of productive land uses.

Exhibition is primarily seeking feedback on the master plan framework and redevelopment approach with final zoning and permissibility to be informed by submissions and ongoing investigations.

Macquarie Coal Complex Rezoning Area - Existing Zoning

Before relying on the information on this map, users should carefully evaluate its accuracy, currency, completeness and relevance for their purposes. The Department cannot guarantee and assumes no legal liability or responsibility for the accuracy, currency or completeness of the information.

Figure 5 | Current Land Use Zoning (Source: The Department of Planning, Housing and Infrastructure)

2.2.1.1 Consent authority

The Minister for Planning (or delegate) will be the consent authority for all development within the Precinct.

2.2.1.2 Exempt and complying development

Exempt and complying development is to be enabled in the Precinct via the *State Environmental Planning Policy (Exempt and Complying Development Codes) 2008* (Codes SEPP).

A provision will be included within the Precincts-Regional SEPP to identify the precinct as a prescribed zone.

2.2.1.3 Subdivision and demolition requirements

Subdivision and demolition within the Precinct are to be only carried out with development consent.

2.2.1.4 Temporary land use

Land in the Precinct can be used for temporary development (for a maximum period of 182 days) provided it does not prevent the subsequent carrying out of development in accordance with the objectives of the Precinct.

2.2.1.5 State significant development

The proposed amendment will insert in Schedule 2 of the Planning Systems SEPP the Precinct as an identified site for State significant development.

2.2.1.6 Master Plan

The Rezoning Proposal is supported by a draft Macquarie Coal Complex Master Plan (draft Master Plan) prepared by the Department and informed by technical and environmental analysis. The following technical reports were prepared to inform the draft Master Plan:

- Contamination and geotechnical reports
- Flooding and water cycle management
- Traffic and transport report
- Dam report
- Biodiversity and bushfire assessment reports

The draft Master Plan is a strategic planning tool designed to guide the long-term transformation of the Precinct. It makes sure that development occurs in a coordinated and infrastructure-ready manner, aligned with land use constraints and environmental protection that support the Precinct's vision for a dynamic, employment-led precinct which stimulates investment in the region.

It is proposed to include a provision within the Precincts – Regional SEPP that a Master Plan applies to the Precinct and contains the following information:

- the strategic vision and general objectives for the Precinct
- the objectives and performance criteria for development
- heritage items or places of heritage significance

- limitations on development on certain land, including environmentally sensitive areas, land prone to flooding and cultural heritage areas
- and any further matters requested by the Minister.

Development consent within the Precinct must not be granted to development unless the consent authority has considered the Master Plan, with the Minister also having the power to amend or replace the Master Plan.

All future development will be guided by the Master Plan, which will direct the long-term transformation of the Precinct, ensuring that development is well-coordinated, supported by necessary infrastructure, and aligned with land use constraints.

Following exhibition, the Department will finalise a Master Plan for the Precinct and provide additional design guidance for future development within the Precinct. The final Master Plan will be published on the planning portal website at finalisation.

A provision is proposed to be included in the Master Plan to require an addendum for development proposed on land mapped as environmentally constrained under the Structure Plan. There may be one addendum that applies to the whole site, or several for different stages.

2.2.2 Miscellaneous provisions

The following additional controls will manage certain types of development and are compulsory under the *Standard Instrument – Principal Local Environmental Plan (2006 EPI 155a)*.

2.2.2.1 Flood planning and risk management

To set out controls to make sure development considers flooding impacts and compatibility as well as provide development can provide for safe occupation and evacuation.

2.2.2.2 Controls relating to miscellaneous permissible uses

To set out controls to make sure development for the purpose of miscellaneous permissible uses.

2.2.2.3 Conversion of fire alarms

To regulate fire alarm systems compatible with Fire and Rescue NSW or private monitoring services.

2.2.2.4 Bush fire hazard reduction

To identify that authorised bushfire hazard reduction work may be carried out without development consent.

2.2.2.5 Infrastructure development and use of existing buildings of the Crown

To identify that this chapter within the Precincts – Regional SEPP does not restrict the carrying out of development on, or behalf of a public authority as outlined under the *State Environmental Planning Policy (Transport and Infrastructure) 2021*.

2.2.2.6 Proximity to rail and gas infrastructure

Development near rail corridors and gas pipelines must maintain appropriate setbacks and involve consultation with the relevant authorities.

2.2.2.7 Public utility infrastructure

To require that Consent authorities must confirm that essential infrastructure is available or adequately planned before approving development.

2.2.3 Maps

The proposed amendment is seeking to insert the following maps in the Precincts – Regional SEPP (refer to **Appendix A – Maps**) that will apply to the Precinct:

- Land application map
- Acid sulfate soils

The excision of the Precinct from the application of LMLEP 2014 will mean corresponding controls no longer apply. Relevant maps in the LMLEP 2014 that will no longer apply to the Precinct include:

- Land application map
- Land zoning map
- Height of buildings map
- Lot size map
- Acid sulfate soils.

2.3 Other amendments

2.3.1 State Environmental Planning Policy (Planning Systems) 2021

The Planning Systems SEPP declares certain kinds of development as State Significant Development (SSD).

It is proposed to amend Schedule 2 ‘State significant development—identified sites’ of the Planning Systems SEPP to include the Precinct and identify the following types of development as SSD on land within the Precinct:

- development that has an estimated development cost (EDC) of more than \$30 million on land identified as being within the Precinct.

The proposed amendment will be reflected through the introduction of a map identifying the Precinct. The reasons for supporting this SSD pathway within the Precinct include:

- **Regional significance** – the proposal will deliver on State Government objectives in the Hunter Regional Plan 2041, and will increase local jobs and provide recreational opportunities
- **Public Benefits** – the rezoning proposal will deliver up to 1,130 ongoing jobs to assist in the region’s economic transformation
- **Economic benefits** – the proposal will deliver economic benefits to the Lake Macquarie region by creating a new precinct to support up to 1,130 ongoing jobs
- **Complex and unique** – there is a role for the State Government in the delivery of the Precinct. this will support the orderly and efficient development of the Precinct and benefit the community.

3 Considerations

In addition to proposed changes outlined in Section 2, the Department has also considered other specific matters that are relevant to this draft Rezoning Proposal. Other relevant State Environmental Planning Policies (SEPPs) will continue to apply to the precinct. These considerations are explained below.

3.1 State Environmental Planning Policy (Hazards and Resilience) 2021

State Environmental Planning Policy (Hazards and Resilience) 2021 (Hazards and Resilience SEPP) sets out provisions for coastal management, hazardous and offensive development and remediation of land. The Rezoning Proposal is supported with a suite of technical studies which demonstrate compliance with Hazards and Resilience SEPP. A Biodiversity Assessment Report has been prepared by SLR to support the proposed rezoning and master plan. The draft structure plan has been prepared with consideration to biodiversity, including coastal wetlands mapped under the Hazards and Resilience SEPP.

A Contamination Technical Assessment was prepared by Aurecon, providing a land use compatibility assessment to support the proposed rezoning. The assessment makes recommendations for the master plan and notes that all future development will be subject the requirements of the Hazards and Resilience SEPP.

3.2 State Environmental Planning Policy (Biodiversity and Conservation) 2021

State Environmental Planning Policy (Biodiversity and Conservation) 2021 (Biodiversity and Conservation SEPP) sets out provisions for koala habitat protection. The Rezoning Proposal is supported with a suite of technical studies which demonstrate compliance with Biodiversity and Conservation SEPP, specifically Chapter 4 - Koala Habitat Protection 2021.

It is noted that future development is required to be assessed under the Biodiversity and Conservation SEPP to assess potential impacts to koalas and koala habitat.

4 Infrastructure funding and delivery

Identification of infrastructure items needed to service the Rezoning Proposal, together with as their delivery and timing has been informed by the updated technical studies and consultation with government agencies.

Indicative infrastructure needs will be further investigated with agencies and services providers as part of the finalisation of the rezoning.

4.1 Local contributions

Part 7 of the EP&A Act allows for a local council to prepare and implement a contributions plan to capture payments to fund the provision of local infrastructure required by a development.

The Lake Macquarie City Council *Section 7.12 Citywide Development Contributions Plan 2025* (contributions plan) applies to the site and allows Council to require developers to pay contributions towards the provision of new or expanded local infrastructure identified in their local infrastructure contributions plans. This helps to meet the increased infrastructure demand created by new development within the local government area.

Contributions towards the provision or improvement of amenities or services under the contributions plan will be required at development application stage.

4.2 State contributions

Housing Productivity Contribution

The Housing and Productivity Contribution (HPC) applies to development in the Rezoning Proposal area. The HPC provides funding for State or regional infrastructure across the Greater Sydney, Illawarra Shoalhaven, Lower Hunter and Central Coast regions.

Contributions collected help to deliver essential State infrastructure such as schools, hospitals, major roads, public transport infrastructure and regional open space.

The contribution applies to development applications for new residential, commercial and industrial development (complying development and State significant development).

Further information on the HPC can be found on the Department's website.

Urban Development Program

The Urban Development Program (UDP) coordinates NSW Government agencies, local councils and industry to build consensus on priorities, align plans for housing and infrastructure and coordinate delivery and investment. It leads the preparation of Infrastructure Opportunities Plans (IOP) to identify infrastructure eligible to be considered for funding under the HPC.

Key state infrastructure items set out in the IOP in and around the Rezoning Proposal includes:

- Upgrade of Five Islands Road, T.C. Frith Avenue and the Esplanade, roundabout intersection at Speers Point.

4.3 Other infrastructure

Where there are any limitations in use of a local contributions plan or the HPC, the Department, infrastructure providers and Council will need to identify a suitable alternative funding source such as grants, incentives or planning agreements. The Department will continue to collaborate with stakeholders to identify potential funding sources for infrastructure delivery.

5 Next steps

The Department will continue to collaborate with Glencore, Council, Australian Government through NZEA, key NSW Government agencies and other stakeholders throughout the assessment of this Rezoning Proposal.

Community consultation is an important part of the planning process. The public exhibition is the formal consultation period for the community, Council and agencies to provide their feedback. During this time the public is encouraged to view the proposal documents and provide formal feedback through a submission.

Following public exhibition, the Department will consider all matters raised in submissions.

Once the submissions have been reviewed, the Department will update of the Rezoning Proposal in response to the feedback received, and nominate a land use zone and associated land use table.

The final Rezoning Proposal will then be shared with the Minister for Planning and Public Spaces for consideration and approval. If the amendments are approved, the proposal will progress to the NSW Governor, as President of the Executive Council, for formal gazettal to facilitate future development within the rezoning area in line with the planning controls.
